

SCORING: FAVORITE WEDGE

NAME: _____

Record your "Average" distance below for each club and swing. Play to your average distance.

| Club | Full Swing | 3/4 Swing |
|--------|------------|-----------|
| Lob | | |
| SW | | |
| Gap | | |
| PW | | |
| 9 iron | | |
| | | |

To find your favorite wedge distance hit 10 balls at a series of markers spaced 10 yards apart (circles below are 5-yard increments). Use an "x" to plot where each ball lands relative to the markers. The goal isn't to hit the markers. The goal is to learn to make a consistent, repeatable swing, and then learn **how far that swing goes**. After plotting the landing spot for each ball, draw a circle around the outside of the dispersal pattern connecting each x. Then draw a big X through the middle of the circle. The middle is your "average" distance with that club and that swing (see the example to the right). When playing - plan your course navigation strategy around your average distances and your favorite wedge. Hit 10-ball sets with each wedge using a full swing and a 3/4-swing. Record your average distance in the box to the left.

You will find that one particular club and one particular swing at one specific distance will produce the most consistent shots and tightest dispersal pattern. **That is your favorite wedge distance.**
